Moyenne au second semestre

Information non fournie

Je n'ai pas de moyenne au semestre.

Oui

Commentaire

I am in my 8th semester of my studies (final year). I have obtained 208 ECTS out of 210 ECTS credits. So, I have the transcripts 7 semester. My cumulative GPA until now is 4.7/5 . I have uploaded all the transcripts of 7 semester in the second semester option.

SUMMARY

Electrical Engineering student specializing in signal processing, embedded systems, and data driven sensing platforms. Research experience at HUN-REN Energy Research Centre developing machine learning pipelines, real-time measurement systems, and hardware–software integrated experimental platforms. Interested in intelligent data processing, communication systems, and cyber-physical infrastructures where sensing, computation, and control intersect. Complemented by industry experience at SAP, developing automation and monitoring tools for large network infrastructure. Seeking graduate training with a strong research orientation.

EDUCATION

University of Debrecen, Hungary

BSc in Electrical Engineering (Information Technology specialization)

Sep 2022 - Aug 2026 (ongoing)

GPA: 4.7 / 5.0

RESEARCH EXPERIENCE

HUN-REN Energiatudományi Kutatóközpont

Research Intern

Jan 2025 - Feb 2025

Budapest, Hungary

- Developed an intelligent image-analysis pipeline for nanoparticle and thin-film characterization, training models on 3,500 annotated microscopy images to extract size distribution, morphology, and statistically validated material properties.
- Implemented a Flask-based inference interface integrating CNN and classical computer-vision methods to support reproducible experiments, batch processing, and automated materials analysis workflows.
- Designed robust preprocessing and validation pipelines (noise filtering, artifact rejection) and evaluated performance using MAE, RMSE, and residual analysis, improving measurement reliability and consistency in semiconductor thin-film research.

HUN-REN Energy Research Centre

Research Intern

Jun 2024 - Aug 2024

Budapest, Hungary

- Designed and implemented a PID-controlled thermal regulation module achieving ± 0.5 °C stability for thin-film ellipsometry experiments, integrating a PT100 sensor, microcontroller logic, and programmable power supply.
- Built real-time data acquisition and calibration routines in Python and microcontroller C/C++ for temperature sensing, noise reduction, and feedback-loop optimization under hardware constraints.
- Conducted signal characterization and system identification to tune PID gains and ensure stability under varying thermal loads, improving measurement accuracy for materials research.
- Developed diagnostic and automation scripts in a Linux environment for device communication, serial-data logging, and high-frequency sampling, enhancing reproducibility for ongoing experiments.

INDUSTRY EXPERIENCE

SAP Emarsys

Scripting and Automation Specialist Intern (Network Infrastructure Team)

Sept 2025 – Ongoing

Budapest, Hungary

- Automated the collection of audit evidence across network infrastructure environments by integrating with third-party monitoring and configuration systems, executing predefined SSH terminal commands on routers, switches, and firewalls for compliance validation.
- Designed and maintained API endpoints that pull real-time configuration and performance data directly from third-party network management databases (e.g., CMDBs, Panorama, monitoring tools), streamlining access for audits and enhancing accuracy and efficiency in network-related reporting.

Synergy Construct - CATL Phase 1 site

Electrical Engineering Intern – Project Control Systems

Jun 2025 - July 2025

Debrecen, Hungary

- Assisted in technical review and interpretation of electrical design plans, ensuring consistency across multi-disciplinary engineering teams.
- Contributed to progress-tracking and validation workflows supporting industrial control and monitoring systems.
- Strengthened understanding of large-scale engineering and pipelines implementation.

COURSEWORK HIGHLIGHTS

- Mathematics: Probability, Statistics, Vectors and Matrices, Algebra, Calculus
- Programming: Python, C++, JavaScript, LabVIEW, VHDL, FPGA
- Signals and Linear Systems: signal representation, convolution, frequency-domain analysis
- Control Systems: feedback control, PID control, stability analysis, system identification

PERSONAL PROJECTS

OpenCV-Driven Bionic Arm | Python, Support Vector Machine (SVM), ESP32, EMG, Servo Motors, Haptics

- Processed and modeled EMG signal datasets to train ML classifiers that map muscle activity to servo-based limb movements.
- Integrated haptic feedback using pressure and thermal sensors, generating multimodal data for adaptive control.
- Used OpenCV for gesture detection and incorporated real-time data processing pipelines to enhance interactivity and system responsiveness.

Probabilistic Forecasting and Threshold-Based Anomaly Identification | Pandas, TensorFlow, Seaborn

- Designed a probabilistic deep-learning model integrating trend, seasonality, and noise decomposition to improve robustness on irregular real-world datasets.
- Implemented uncertainty-aware prediction intervals (Monte-Carlo dropout / quantile regression) enabling statistically grounded anomaly detection rather than threshold heuristics.
- Developed a hybrid anomaly identification framework combining probabilistic deviation scoring with statistical residual analysis, achieving reliable detection even under missing data and high-variance conditions.
- Built a reproducible end-to-end pipeline for data preprocessing, model training, validation, and evaluation, improving interpretability and reliability for scientific or industrial monitoring applications.

TECHNICAL SKILLS

Programming and Scientific Computing: Python, C++, MATLAB, Linux (Bash), Git, VS Code

Signal Processing, Estimation & Control: signal preprocessing, noise filtering, feature extraction, residual analysis, PID control, stability analysis, system identification, real-time signal acquisition

Machine Learning (as an Enabling Tool): TensorFlow, Keras, Scikit-Learn, OpenCV, Optuna (HPO), Pandas, NumPy, Matplotlib, Seaborn, probabilistic modeling, uncertainty estimation, anomaly detection

Embedded Systems & Cyber-Physical Systems: Arduino, ESP32, microcontroller programming, sensor integration (PT100, EMG), actuator interfacing, serial communication

Systems & Software Engineering: Flask, automation pipelines, data processing workflows, CI/CD, GitLab, Jira, AutoCAD

LEADERSHIP / EXTRACURRICULAR

- Trainer, Erasmus+ Workshop (ELTE, Hungary) – Conducted sessions on AI awareness and interdisciplinary applications for international student groups.
- Participant, Erasmus+ Youth Exchange (Poland) – Promoted mental health and inclusion through sports.

RECOMMENDATIONS

- Dr. Peter Petrik | petrik.peter@ek.hun-ren.hu | Professor at University of Debrecen | <https://petrik.ellipsometry.hu/>
- Dr. Istvan Csarnovics | csarnovics.istvan@science.unideb.hu | Associate Professor at University of Debrecen
- Mr. Imre Lugosi | imre.szabolcs.lugosi@sap.com | Technical Project Manager at SAP Hungary

Certificate of student status

The **University of Debrecen** (registered seat: **4032 Debrecen Egyetem tér 1.** , institutional identification number: **FI17198**) hereby certifies that the student status of

Mohammad Shoeb

(birth name: **Mohammad Shoeb**, place of birth: **Aligarh** (settlement), **India** (country) , date of birth: **7 April 2003**, Mother's first and last name at birth: **Parveen Nisha**, address: **9999** (postal code) **Aligarh** (settlement), **Street No. 2, Jamalpur utca 4.** (street address); student identification number: **74063809896**),

in the **autumn** semester of the **2025/26** academic year (which starts on **1 September 2025** and ends on **31 January 2026**) is

Active (not interrupted).

The student status of above named student was entered on **30 August 2022**, and the estimated date of the student's graduation, based on the academic performance and the requirements is **31 July 2026**.

The student is pursuing studies in the institute of higher education in the following programmes:

No.	Programme	Status	Level	Type of programme	Type of funding	Expected date of graduation
1.	Electrical Engineering (BSc)	Active	BA/BSc	Full-time training	Self supporting student	31.07.2026

The purpose for which this certificate was issued:

Admission Committee
Institut Polytechnique de Paris, France

12/03/2026

Subject: Application for M1 EE - Electrical Engineering at Institut Polytechnique de Paris

Dear Members of the Admission Committee,

I am writing to express my interest in the master's program in Electrical Engineering. I am currently completing a BSc in Electrical Engineering at the University of Debrecen, Hungary, under the Stipendium Hungaricum Scholarship, a fully funded merit-based scholarship. During my studies, I developed a strong interest in communication systems, signal processing, and embedded electronics. Through coursework, personal engineering projects, and research internships, I have focused on understanding how electronic systems are modeled, implemented, and tested in practical environments.

One of the projects that strongly shaped my interest in electronic systems was the development of a signal processing pipeline for a software-defined radio implemented on an FPGA platform. In this project, I designed digital communication modules in VHDL, including FIR filtering, carrier synchronization, symbol timing recovery, and BPSK/QPSK demodulation. Implementing these components required applying theoretical knowledge from signal processing and communication theory while addressing practical constraints of hardware implementation and real-time processing.

Another project that strengthened my understanding of signal acquisition and embedded control was the development of an EMG-based myoelectric control system for an assistive robotic arm. The system converts muscle signals into motion commands using signal preprocessing and classification methods implemented on an ESP32 microcontroller. I implemented signal classification methods for EMG-based control systems.

My research internships at the HUN-REN Energy Research Centre in Budapest further strengthened my interest in experimental electronics and control. During one internship, I designed a PID-controlled thermal regulation system for thin-film ellipsometry experiments. The system combined PT100 temperature sensing, microcontroller-based feedback control, and automated data acquisition to maintain temperature stability within $\pm 0.5^\circ\text{C}$. In addition, I worked on machine learning pipelines for measurement data analysis. This work required system identification, analysis of noise, and tuning of PID parameters to achieve stable performance.

In addition to research experience, my internship at SAP within the Network Infrastructure team exposed me to large-scale engineering environments. In this role, I developed automation tools that interact with network infrastructure systems and monitoring platforms. Working in this environment improved my software engineering practices and strengthened my understanding of reliability, system integration, and the operation of complex technical systems.

What defines my academic profile is the ability to work across both theoretical and practical aspects of electrical engineering. My coursework in signals and linear systems, control systems, and electronics provides

the theoretical background needed to understand communication and control systems, while my projects and internships allowed me to apply these concepts through hardware implementation, embedded programming, and experimental measurements.

I am particularly interested in the Electrical Engineering program because of its strong focus on communication systems, signal processing, and electronic system design. During the second year of the program, I am especially interested in the Machine Learning, Communications and Security specialization. My previous work has already introduced me to the intersection of signal processing and machine learning. These experiences motivated me to further explore how machine learning methods can be applied to communication signals, network data, and wireless systems. The program therefore represents an ideal environment to improve my understanding of communication technologies and their interaction with machine learning methods.

In the long term, I aim to work on the development of communication technologies such as 6G and future wireless systems, especially interested in the design of communication signal processing methods and embedded platforms used in wireless infrastructure and connected devices. I believe that offered subjects by your program will provide the foundation to pursue these goals.

Thank you for considering my application.

Sincerely,

Mohammad Shoeb

Dr. Peter Petrik

Professor, Department of Electrical Engineering

University of Debrecen, Hungary

Head of Photonics Department, HUN-REN EK MFA

Email: petrik.peter@ek.hun-ren.hu

Dear Admission committee:

It is with great pleasure that I write this letter of recommendation for Mr. Mohammad Shoeb, a final-year undergraduate student pursuing his Bachelor of Science in Electrical Engineering at our department. I have had the opportunity to know Shoeb closely as his course instructor, research advisor, and thesis supervisor. Over this period, I have observed his steady academic growth and his strong inclination toward programming, machine learning, and applied research in image processing and computer vision.

Mr. Mohammad's academic curiosity and diligence were evident from the beginning of my lectures, where he consistently stood out for his attentiveness, grasp of complex concepts, and eagerness to engage in meaningful discussions. His transition from a keen learner to a capable researcher has been commendable. During his internship under my supervision, he worked on developing a machine learning approach to trace and count *SEM images of gold nanoparticles*. The project began with basic mathematical fluctuation analysis, gradually moving toward classical *machine learning algorithms*, and finally incorporating *deep learning* models. Throughout this process, Shoeb displayed an impressive balance of theoretical understanding and practical implementation skills, often exploring beyond what was expected.

Currently, Mohammad is completing his undergraduate thesis titled "*Analysis of Optical Measurements by Machine Learning and Analytical Models for Sensors*." This work integrates physical modeling with data-driven techniques to enhance sensor analysis accuracy. His progress has been exceptional, and his preliminary results already indicate promising outcomes that he is documenting meticulously. In parallel, He is independently working on solving the inverse problem in Ellipsometric *data* using machine learning approaches. He began by applying simple regression-based algorithms and is now experimenting with advanced architectures to capture nonlinear relationships more effectively. It demonstrates his intellectual maturity and his ability to self-learn and innovate.

Beyond academics, Shoeb is a humble, reliable, and sincere student. He collaborates well in teams, communicates his ideas clearly, and remains open to feedback and new perspectives. His problem-solving mindset, patience during experiments, and willingness to assist peers make him a valued member of any research group. He exhibits both the curiosity of a learner and the discipline of a researcher.

Mr. Mohammad Shoeb possesses the intellectual rigor, research aptitude, and professional integrity to excel in any advanced academic or research endeavor. I strongly endorse his application to your esteemed institution, as I am certain he will make meaningful contributions to both the academic and scientific community. For any additional information or clarification, please do not hesitate to contact me at petrik.peter@ek.hun-ren.hu

Sincerely,

Dr. Peter Petrik

TO WHOM IT MAY CONCERN

Dear Admissions Committee,

Mr. Mohammad Shoeb, currently studying at the University of Debrecen, serves as Scripting and Automation Specialist Intern at SAP Emarsys in the Infrastructure Operation team, where I am his direct reporting manager. He supports our preparation effort for security compliance audits through automation work and has proven dependable, motivated, and quick to grasp new problems.

His work in the Infrastructure Operation team demonstrates a quick and impressive technical evolution. Starting from straightforward so-called evidence-collection scripts, he now develops multi-layered automation pipelines that fully orchestrate the generation, transmission, and retrieval of audit evidence. These scripts and pipelines are implemented primarily in Python and JavaScript and leverage complex integration with several different tools used in system operation. It utilizes the API endpoints of the tools and retrieves and collects data in a secure way. Shoeb handles both the planning and implementation of this complex integration with confidence and precision.

I liked the way he consistently produces modular, reusable, and well-structured code based on a brief description and iterative brainstorming. His codes applying industry accepted principles such as separation of concerns, clean interface design, interactive UX, and efficient error handling. His automation outputs are directly usable for security audit presentations and significantly reduce manual intervention during the preparation and the audit phase. He exhibits good thinking skills and quickly grasps new technical concepts, often proposing improvements that reduce effort and make the solution more audit friendly. He is a good contributor and keeps always in mind the final goal is fulfilled.

What stands out most about Shoeb is the way he naturally brings together ideas from different disciplines such as electrical engineering, software engineering, and development. I witnessed him adding some personal improvements to the projects because he saw needs and wanted to make something better.

Shoeb is consistently focused, dependable, and genuinely committed to producing quality work. He needs very little guidance, respects timelines, and completes tasks with care and punctuality. His curiosity drives him to explore new technologies, and he often experiments with them to create inventive solutions. He communicates clearly, thinks analytically, and approaches challenges with maturity. These qualities make him a reliable contributor with strong potential for continued growth.

Based on my experience working with Shoeb, I am certain he will approach his higher studies with the same curiosity, determination, and eagerness to learn that he demonstrates each day. Whether he pursues a research-oriented track or enters another advanced academic setting, I have no doubt he will continue to grow, adapt, and contribute the same way. His attitude toward learning is consistent and sincere, and he brings a level of discipline and motivation that will serve him well in any environment. I sincerely advocate on his behalf and hope you will consider giving him this opportunity. I wish him the very best as he takes the next step in his academic and professional journey.

Sincerely,

Date: 08 Mar 2026

Mr. Imre Lugosi
Technical Project Manager
SAP Emarsys

Recommendation letter

To whom it may concern

I am writing to strongly recommend Mr. Mohammad Shoeb, a Bachelor of Science student in Electrical Engineering, for admission to the Master's program at your university. I have taught him multiple courses, including Nanotechnology, Photonics, and Material Science, and have also supervised him in laboratory sessions on Measurements and Instrumentation. Throughout these courses, Shoeb consistently distinguished himself as one of the most attentive, disciplined, and technically capable students in the class.

Mr. Shoeb has demonstrated a clear ability to grasp advanced engineering concepts and apply them to real-world problems with precision. His focus in class is unwavering, and his analytical thinking often leads to insightful questions and innovative approaches during discussions. In laboratory work, he showed strong adaptability in learning new technologies and tools. He quickly mastered platforms such as MATLAB and LabVIEW, using them effectively for simulation, data analysis, and instrumentation control. His capacity to absorb new material and translate it into functional results reflects a deep understanding of both hardware and software aspects of engineering systems.

In addition to his academic performance, his conduct and professionalism have always been exemplary. He collaborates effectively with peers, communicates his ideas clearly, and consistently meets deadlines with well-organized work. His ability to combine analytical thinking with practical implementation makes him ideally suited for research and development roles that demand both precision and creativity.

In my professional assessment, Mr. Mohammad Shoeb is a highly capable and motivated individual who possesses the intellectual rigor, technical competence, and personal discipline required to excel in a demanding graduate program. I am confident that he will contribute meaningfully to your academic community and pursue his research goals with dedication and success. I recommend him without any reservation.

Sincerely,

István Csarnovics Ph.D. dr. habil.

Associate professor/Educational officer

University of Debrecen, Faculty of Science and Technology

Institute of Physics, Department of Experimental Physics

Test Report Form

ACADEMIC

NOTE Admission to undergraduate and post graduate courses should be based on the ACADEMIC Reading and Writing Modules.
 GENERAL TRAINING Reading and Writing Modules are **not** designed to test the full range of language skills required for academic purposes.
 It is recommended that the candidate's language ability as indicated in this Test Report Form be re-assessed **after two years** from the date of the test.
